Details:

Healthy blood circulation, especially in the brain and extremities, is an important function for maintaining good health. In this unique formula, each capsule contains a synergistic blend of stone root, ox bile, and ginkgo biloba, that helps stimulate circulation and promote better body functionality.

Several studies concerning ginkgo biloba have stated that it improves blood circulation by reducing the sticky quality of blood platelets and dilating blood vessels.

Ginkgo has been used in traditional medicine to treat circulatory disorders and enhance memory. Emerging evidence suggests that it may be particularly effective in

treating ailments associated with decreased blood flow to the brain. It also contains two types of chemicals (flavonoids and terpenoids) believed to have potent antioxidant properties.

Stone root has been used to reduce back pressure in the veins, which in turn helps prevent the formation or worsening of hemorrhoids and varicose veins. It has been used as a stimulating remedy for ailments of the heart and kidneys, as well as for general listlessness. It has a special influence on the nervous system and mucous membranes, removing congestion and improving circulation of the capillaries.

Ox bile has been used for reducing and breaking up plaque in the circulatory systems, which ultimately promotes healthy circulation. Studies have shown that ox bile can influence (and possibly reverse) defects in nerve blood flow, motor nerve conduction velocity, and nerve sensory thresholds. It crosses the blood-brain barrier and has been implicated in a wide array of physiological phenomena including inhibitory neurotransmission.
